Mosby's Pathophysiology Memory NoteCards: Visual, Mnemonic, And Memory Aids For Nurses, 2e

Synopsis

Use this set of colorful cards to learn and remember pathophysiology! With 96 full-color cartoons covering pathophysiologic concepts, Mosby's Pathophysiology Memory NoteCards, 2nd Edition uses humor and mnemonics to make review easier and more fun. These durable, detachable cards are useful in preparing for the NCLEX® or classroom exams, as a clinical reference, for writing care plans, or for patient teaching information. Created by nursing educators JoAnn Zerwekh, MSN, EdD, RN, Jo Carol Claborn, MS, RN, and Tom Gaglione, RN, MSN, this convenient study tool may be used as either a spiral-bound notebook or as individual flashcards. Unique! 96 full-color illustrated mnemonics cover key pathophysiology concepts. Sturdy, spiral-bound cards offer durability as well as portability. Colored tabs make it easy to find topics. Concise What You Need to Know monographs on each card provide more detailed information and specific nursing implications. Unique! Color highlights emphasize four central topics: Serious/life-threatening implications in pink Common clinical findings in blue Important nursing implications in yellow Patient teaching in green 24 new or revised cartoons cover contemporary and timely pathophysiology topics, including these new cards: HIV in Children and Infants Upper and Lower Respiratory Tract -- Breathing vs. Gas Exchange Pneumonia Rh Factor Insulin -- What Does It Do? Erectile Dysfunction Benign Prostatic Hypertrophy (BPH) The image collection, now part of the Evolve Instructor Resources, allows instructors access to the complete set of 96 full-color illustrations from Mosby's Pathophysiology Memory NoteCards with qualified adoption.

Book Information

Spiral-bound: 208 pages

Publisher: Mosby; 2 edition (June 23, 2010)

Customer Reviews

These flashcards are by far the worst review material I have ever used, and especially from Mosby/Evolve. A ton of stuff is spelled wrong, at least 20% of the text is actually incorrect, and some of the diseases covered don't even include signs and symptoms. I thought that these notecards would be an easy resource to use to get ready for a HESI pathophysiology exam, but I figured out quickly this was not the case. I do not recommend buying these. If you don't believe me, just look over the respiratory section. Whatever idiot wrote and edited these put "course" instead of "coarse" when speaking of crackles. Seriously?! Or under the Hypercapnia/Respiratory Acidosis section--they said hypoventilation was a s/s of respiratory acidosis on the picture side and on the flip side it says all the opposite. I'm able to tell which one is which since we covered this in my previous semester, but for those with no previous experience, it's really confusing (and no, Hypoventilation is NOT a sign of respiratory acidosis, but it can be a cause--although those weren't listed either)

If you have ADHD, and are a visual and auditory learner like me THIS IS THE BOOK FOR YOU. This book gives pictures (wish they were colored in) that correspond to the disease and they have mnemonics to go along with them. "Cold and clammy, give'em some candy" for hypoglycemic and then they show them shivering. I used the book after my 2nd test and when I tried to picture the disease I closed my eyes and saw a guy shivering with sweaty palms and BAM remembered the saying. Now that's just for 1 of the 100 disease processes they made pictures for but it helps. I would get this along with Mosby Pharmacology flip book as well as the Memory Notebook of Nursing vol 1 and 2 all of which have these pictures and quirky sayings on them to help you remember what is what. Ya it's a lot of money but what's cheaper re-doing a semester or buying a book that lets you pass the test the first time.

Very easy to use. Helpful and organized. However I thought the cards would go into very specific detail of many diseases. Not so. Review of each system and what can go wrong in each but not details about many common diseases

I have the electrolytes, pharm and patho cards, and this has definitely been a helpful set. If it's in your budget to buy any of them though, I would buy the electrolyte cards before these. Only because so many pathologies have electrolyte imbalances and so many signs and symptoms come from electrolyte imbalances.

This is very handy for me. I am a nursing student and it has little memory cartoons that are helpful in a pinch....I keep it in my bag at clinical.

These cute little note cards make it so easy to learn many disease processes. I keep it with me at work and when I want to refer to it I just take it out. There are drawings of clinical situations that'll help someone remember the condition and the symptoms, and when you want to understand it even further, you refer to the other side of the card. Very clever book.

This is an invaluable tool if you are going into any healthcare field. These note cards aid with learning fact and figures that have to be know. Also they make it easy to remember these facts for a long time. I have must of these aids and they work well.

This item it great, it can go in my purse for easy reference. It helps put things together to help me simplify things for my nursing exams. I would highly recommend this item to anyone.
