Customer Reviews

A perfect addition to USMLE World. Throughout medical school I've developed a tendency to hoard books before actually sitting down to prepare for tests. It's clearly a way to feel mentally well-armed, and is somewhat ridiculous. I bought several books for Step 2 - Crush, Secrets, First Aid, and Step Up to Step 2. I read a few chapters in Crush but it seemed way too simplistic. Secrets is just a list of questions that corresponds to the material covered in Crush. I bought First Aid because I used it for Step 1 - like everyone else - but the book gave me a headache. It reads more like a pastiche of trivia than an organized review book. Despite the scarcity of reviews out there on Step Up to Step 2 I bought it because I LOVED Step Up to Medicine - hands down the most helpful book I used in all

of med school. Step Up to Step 2 isn't nearly as thorough as Step Up to Medicine. At first, it seemed too pared down, but when I started answering USMLE World questions I realized that there was so much that was covered in Step Up to Step 2. It somehow manages to strike the perfect balance. It's digestible yet comprehensive. For such a thin book, it's pretty amazing. Seriously, the book is far superior to the others out there.

I chose this book initially because it was very concise (only 322 pages including index, etc etc) and with only a month to study for Step 2, I wanted concentrate on doing questions. The pros for this book: it is very concise and to the point. It explains each syndrome, basic pathyophys, h&p, and management. It also has some good algorithms and mneumonics. The bad: Many errors and typos. I've been careful not to completely rely on this book for factual data, but write notes in it according to my other references. Also, many syndromes that I thought should have been included are left out (i.e. not a word about hereditary spherocytosis that I could find). Furthermore, outside of the ones we already know about, most of the mneumonics are kind of random, long, and not very useful (i.e. there's a mneumonic to remember what symptoms occur for the flu) So, if you plan to use this book as a primary study tool, I would not advise it. But, I've found it useful for myself to write notes while doing study questions. Just be careful about the errors/typos.

Let me preface by saying that I prefer the First Aid series in general over the Step Up books especially for the USMLE Step 1. However, this book is superior to that of First Aid for Step 2. The information presented in this book is not obvious and straightforward as in the First Aid book. The authors did a better job screening topics and clarifying areas while still maintaining as much detail as the First Aid for Step 2 book. They also do a better job discussing treatment and diagnosis. BUT...the page numbers are misleading. There might only be 300 pages but each page is fairly dense and offers smaller print than the First Aid Step 2 book so while it may contain 300 pages, it truly reads like a 500 to 600 page book. Don't purchase this book if you think it's a fast read because it isn't and you will spend just as much time (if not more time) reading this book than the First Aid for Step 2 book.

I just took Step 2 CK yesterday. I used both this book and First Aid for Step 2 CK and despite the fact that I really liked First Aid for Step 1, I really did not like it for Step 2 and found Step Up to Step 2 to be much more user friendly. With that being said, NO book completely prepares you for Step 2 and I think that regardless of which book you use, you should still do a question bank because a

TON of your learning will come from there (I used USMLE World, and the format of USMLE World looked EXACTLY like Step 2 CK did on test day). Some might wonder if First Aid covers more info than Step Up since it is a much longer book, but that seemed to not be the case when I looked at the 2 books. First of all, First Aid has a bunch of info on the front about how to register for the test, etc (much like the step 1 book), and Step Up covers each board's topic much more succinctly than First Aid. If I thought there was some relevant info missing from Step Up to Step 2, I either referenced Step Up to Medicine (which I had used on my medicine rotation) or perused First Aid for Step 2 to see if there was any missing important information.
