Customer Reviews

Initial chapters cover diagnosis, treatment planning, and medically compromised patients. These are followed by chapters on specific procedures, each procedure is covered by both chronological clinical photographs of specific cases, including pre and postsurgical ones, as well as by discussion of the technique, with ample literature citations about the success level of each. The newest techniques, guided tissue regeneration (GTR) and bone grafts, are also covered, with the final chapter on supportive periodontal care. Figures are used when necessary, along with radiographs, and a few histological slides. There is not an excessive amount of text, so reading about each procedure is easily accomplished, nor is textbook jargon used. Unlike some surgical textbooks, the photographs have been cleared of debris and the tissue is easily seen. Each photograph has been taken from the same location (or edited to approach this) for ease of viewing, understanding the technique, and comparing of techniques. Each technique is evenly handled as to its success (or failure) based on the research that has been done. The hardback text size is larger than normal so that the font and illustration size is comfortable for reading. Many of the postsurgical photographs illustrate many of the remarkable successes now possible, especially in grafting. To their credit, each technique, even if it is not all that new, has incorporated the latest in materials and instruments. The chapter on mucogingival considerations for the adolescent patient puts together

many concepts not witnessed before; it is a very exciting mixture since it covers both orthodontics and aesthetics to allow a healthy adult periodontium. Book Review: Journal of Dental Hygiene, ADHA, 72:2, Fall 1998.

If you have a big interest in periodontics, or if you are a dentist, You have to read this book.

Up to date information with limited scientific background and literature review. However, good quality photos and print makes the book good for understanding and explaining periodontal procedures.
